Working in wildlife health? Interested in research into wildlife health and disease? This course is for YOU!

This 3-day workshop provides an introduction to epidemiology as it applies to the health of wildlife populations. The course will provide you with a better understanding of epidemiological principles and their application to wildlife populations, as well as a range of tools to assist in the investigation and improved understanding of diseases in wildlife.

**Where and when?**
Workshop: Wildlife Epidemiology  
When: 30 August to 1 September 2016  
9.00am to 5.00pm each day  
Where: Sydney Institute of Marine Science  
Conference Room, Administration Building  
Building 19, Chowder Bay Road  
Mosman NSW 2088

**Who should attend?**
The course is targeted primarily at animal health professionals working in wildlife health and surveillance. This includes students undertaking postgraduate degrees, as well as researchers, laboratory professionals, wildlife health managers, epidemiologists and field staff.

**Presenters**
This workshop will be presented by Evan Sergeant and Brendan Cowled, of AusVet Animal Health Services.
